Project Controls are the elements of a project that keep it on time and within budget. Project controls are implemented in the early stages of the planning process, have a significant impact throughout the entire project life cycle, and are an essential element to the successful completion of a project.

From initial contact through facility qualification, our project controls experts provide their professional expertise to assess the details of every project and develop and implement the appropriate level of controls needed to meet project objectives and expectations. Project Controls integrates planning, scheduling, cost and risk management, estimating, progress measurement and document control systems. At IPS, we employ our proven standard operating procedures (SOPs) and quality assurance (QA) methods to enable our clients to measure and achieve key project milestones. Our experts apply these standardized project controls methods through the entire project lifecycle: from initial contact through design, procurement, construction, commissioning and qualification. We provide a customized approach to each project that is designed to meet or exceed our clients' specific requirements.

Our Project Controls team offers expertise in the following areas:

- Planning
- Risk Assessment
- Estimating
- Scheduling
- Cost Control
- Change Management
- Progress Measurement
- Status Reporting
- Document Control
- Project Control Systems Development/Implementation
